## i-series convertible™

***The Barton I-Series Convertible chair and Positioning and Transfer System (PTS) allow a single caregiver to transfer and reposition a dependent patient safely and easily.***

The I-Series chairs feature an unlimited number of reclining and tilt positions to ensure patient comfort and support. The ability to frequently reposition the patient significantly reduces the chance of pressure ulcers and greatly increases the patient's tolerance for long-term seating. The chair has adjustable head, arm and foot rests to further enhance patient comfort. While the chair is in a flat position, lateral transfers are made easy with the Positioning and Transfer System (PTS). The I-Series chairs give staff the ability to get patients out of bed with greater frequency and reduced risk of injury.
